

Romania renewable energy growth

Statista R identifies and awards industry leaders, top providers, and exceptional brands through exclusive rankings and top lists in collaboration with renowned media brands worldwide. For more details, visit our website.

The energy market is expected to continue growing, with increasing demand for energy worldwide as populations grow and economies develop. However, the mix of energy sources is expected to shift towards cleaner and more sustainable options, with renewable energy sources like solar, wind, and hydropower projected to continue growing rapidly. Fossil fuels are expected to gradually decline in importance, although they are likely to remain significant contributors to the global energy mix for several decades, especially in countries that rely almost totally on fossils.

Market sizes are determined through a bottom-up approach, building on specific predefined factors for each market segment. As a basis for evaluating markets, we use resources from the Statista platform as well as annual reports of the market-leading companies and industry associations, third-party studies and reports, national statistical offices, international institutions, and the experience of our analysts.

In our forecasts, we apply diverse forecasting techniques. The selection of forecasting techniques is based on the behavior of the relevant market. For example, the S-curve function and exponential trend smoothing are well suited for forecasting electricity generation due to the non-linear growth of this market, especially because of the direct impact of climate change on the market.

Our values
Multiparty democracy and pluralism
Promoting transition
Environmental and social sustainability
Integrity and compliance
Backing gender equality
Transparency
