

# San salvador electricity

San salvador electricity

Founded in 1995, through AES EEO we distribute electricity in the departments of San Miguel, Morazán, La Unión, San Vicente and parts of Usulután. Besides, we benefit over 352 thousand customers with operations in 6,530 km<sup>2</sup>.

To perform investment and maintenance works in the network, it is necessary to have service interruptions to electric service for the work to be performed with the highest quality and safety standards.

Reproduction in whole or in part in any form or medium without the express written permission of The AES Corporation is prohibited. AES and the AES logo are trademarks of The AES Corporation.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

In the energy domain, there are many different units thrown around - joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources.

Electricity is a good that adds massive value to modern life: from having light at night; to washing clothes; cooking meals; running machinery; or connecting with people across the world. Many would argue that it is a crucial for poverty alleviation, economic growth and improved living standards.<sup>1</sup>

Having clean fuels and technologies for cooking - meaning non-solid fuels such as natural gas, ethanol or even electric technologies - makes these processes more efficient, saving both time and energy.
