Electric Vehicles: Total Cost of Ownership Tool. An interactive calculator where users can compare the costs of owning and operating fossil fuel and electrified vehicles and the effect that changing different variables has on the result

The average cost of a new electric car is 10% higher than the price of a gas-powered vehicle--which costs an average of \$48,451. But fuel costs can add up to significant savings for EV drivers over time.

In this section, we use historic sales and price data for electric and ICE models around the world to examine the total cost of owning an electric car, price trends over time, and the remaining electric premium, by country and vehicle size.⁷ Specific models are used for illustration. Total cost of ownership

Many electric vehicles are available with generous federal, state, local and utility incentives that can dramatically lower the price you pay. The biggest one is the Federal Electric Car...

With electric vehicle prices tumbling in recent months, consumers are facing new considerations about whether EVs could provide overall savings when compared with gas-powered cars. The answer, experts say, may not always be clear cut.

"What I like to say is that comparing gas to EV is like comparing oranges to 20 different breeds of apples," said Keith Barry, a writer for Consumer Reports who focuses on the car industry.

There are several factors to consider when it comes to cost, including the price tag of new and used EVs, electricity costs in your state and how and where you plan to charge your car. Even though EV prices are coming down, they still remain higher on average than gas-powered vehicles, which can be an immediate turnoff for some buyers.

At the same time, EVs can deliver lower maintenance and fuel costs, putting more money back into owners' pockets, according to a report released Wednesday by nonprofit Coltura.

"Comparing a gas sedan to an EV, the differential we found is always positive, as in an EV is always cheaper," said Ron Barzilay, a data and policy associate at Coltura.

Coltura's findings show that the average EV driver saves \$100 a month in fuel and maintenance costs, and that "superusers," or drivers who guzzle up to more than 100 gallons of gas a month, would save an average of \$400 a month by switching to an EV.

The price tag on new electric vehicles is still higher than gas-powered vehicles. Kelley Blue

Book estimates that prices on new EVs dropped from \$65,000 in May 2022 to \$56,648 in May 2024, a 15% decline. But the average transaction price for gas-powered cars in July was still cheaper at \$48,401, according to Kelley Blue Book.

The real place for finding a deal on an EV is in the used market. According to a report from Recurrent, used EVs under \$30,000 now make up 60% of the inventory. As of May 2024, the average price for a used EV was \$28,767, per an iSeeCars study.
