

Solar energy for businesses spain

Solar energy for businesses spain

Our commitment to sustainable development through the photovoltaic sector is carried out through the construction of more than 30 large photovoltaic plants around the world to date, owned by either ACCIONA itself or by customers, with a combined capacity of more than 2 GWp.

Our vocation for innovation has made us pioneers in the installation of large photovoltaic plants with capacities greater than 1 MW. In 2001, we built the largest photovoltaic plant in Spain (Tudela, Navarra) at that time (1.2 MWp). Since then, the company has continued to ramp up research into photovoltaic technology and the construction of flagship plants in Spain, Portugal, Mexico, Chile, the Dominican Republic, South Africa, Egypt, Ukraine and the United States.

In addition to the construction and operation of large plants, we also offer photovoltaic self-consumption solutions to companies, institutions, businesses and individuals.

I just wanted to say that throughout all of the works your team has been very professional, polite, and pleasant. I can't remember all their names but Jos? was the person I spoke to most of the time. Anyway, thanks to them all for their work. Also thanks to you for your patience in answering all of my questions and arranging everything.

We thought you would appreciate some feedback. Our system is working better than we hoped for. We are using no additional means, i.e. electricity, to heat water. We look forward to our next electricity bill!
