Solar incentives thimphu

On 28 June, coinciding with the birth anniversary of Guru Rinpoche, Bhutan Solar Initiative Project (BSIP) inaugurated the 500 kW ground-mounted and grid-tied solar PV project at Dechencholing in Thimphu yesterday.

The endeavour, installation which covers a ground area of 1.2 acres, is the second of its kind under the royal command. The installation, with 784 panels, is expected to produce 835,000 units of energy annually which is equivalent to Nu 3.8 million in revenue.

A 250 kW rooftop installation on the Centenary Farmers' Market (CFM) was completed On June 4. The 393 rooftop panels are expected to generate over 365,000 units of energy annually.

Energy consumption in urban areas is about 5 kW per household. That means the installation at the CFM can power up to 50 households and more than 100 households can be powered by Dechencholing's 500 kW installation.

The BSIP was initiated under the royal command to enhance the country's energy security, to demonstrate continued leadership in environmental conservation, establish technical and economic viability of solar PV in the country, and to build local capacity in a growing and important sector.

The 500kW installation at Dechencholing is the largest mounted solar PV system in the country yet. CFM's 250 kW rooftop installation is the biggest solar rooftop installation in the country.
