

Solar meter for pv monitoring

Solar meter for pv monitoring

Solar panels sit on your roof for decades, silently making electricity from the sun, saving you money and saving the planet a little bit each day. Unfortunately, they're also silent when they're not making electricity, for example due to a wiring problem. To make sure your system is working properly, you need a way to check up on them.

If you haven't yet installed solar panels, this may determine your choice between installers, based on what solution they use. If you already have a solar installation but have no way to monitor it, this guide can help you choose a solution that's right for you.

If you're looking for an easy-to-use solar monitor that shows you the most important solar stats (i.e. kilowatts generated, money earned through the Feed-in-Tariff (FiT) and CO2 saved) and can be quickly installed by yourself, we'd recommend our Solo II PV solar monitor. This in-home display features an easy-to-read, colour screen that shows both real-time and historic solar data.

Plus, the Solo II PV will even tell you (by means of a bright, green finger icon that lights up) when to turn on your high-load home appliances, like your dishwasher or washing machine, to help you use every last kW drop of your generated energy. Take a look at the Solo II PV page for more info.

The energynote web app lets you see your data in as much detail as you'd like to see it in - over the past, weeks, months and even years. What's more, the energynote app makes it possible for you monitor your solar generation from wherever you are in the world - from either your PC, laptop or smartphone.
