

# Solar panel installers west sussex

Solar panel installers west sussex

We've installed and maintained thousands of bespoke domestic and commercial solar panel systems in and around East Sussex, West Sussex and Surrey, with hundreds of happy customers in Brighton, Chichester, Horsham, Crawley, Lewes, Eastbourne, and more.

Unlike big companies, we support you after installation, so if you need help, maintenance or upgrades you can trust we'll always be there for you. We'll even check in after 6 months to make sure everything's ok.

We only use high-quality solar equipment with long warranties when installing your bespoke system. It's unlikely anything will go wrong, but we'll always be there if it does.

Everything you interact with is gradually getting smarter, and your home is too. Your solar system not only allows you to power your devices, but will interconnect with other smart systems in your home, to give you more insight and control.

Solar power enables you to be reliant on your own home rather than the national grid. Your spending on bills and electricity is placed in your own hands, and you won't be so affected by rising energy bills.

By adopting solar you are becoming a beacon of renewable energy within your local community. Do your part to protect the environment and help the UK move away from reliance on fossil fuels.

Solar panels are a clean, efficient and reliable investment for your home. They work all year round, even in winter and on cloudy days, to reduce your energy bills and carbon footprint. Add a solar battery, EV charger or solar diverter to maximise your return.

Our bespoke, premium Solar PV systems are incredibly reliable and require minimal maintenance. They usually just need a good clean every couple of years. If anything does go wrong though, we're always happy to help.

Our team of highly-skilled Design Consultants in our West Sussex team make JPS Renewable Energy the go-to solar panel installers in the UK. We work closely with our clients, and advise them on the best course of action for their unique situations. We take multiple elements into consideration including the type of domestic property, our clients' energy requirements and energy goals to design and install the perfect rooftop solar panel system for them.

Each year the sun produces 8,000 times more energy than we consume globally, ready to use whenever we need it, so why not make the most of this free supply? The benefits of residential solar panels on your West Sussex home also include:

## Solar panel installers west sussex

Improving your carbon footprint: as solar panels generate green, renewable energy there are no harmful pollutants released into the earth's atmosphere. You will directly play a part in protecting the future of our planet. This is the most rewarding benefit echoed by almost all of our customers.

Cutting your electricity bills: There's nothing more frustrating than rising energy bills. Once you've paid for the initial installation, the sunlight is free and your electricity costs will be significantly reduced.
