The increase in extreme weather events and rising sea levels are unmistakable signs of climate change. Roughly 850 million people still live without access to electricity, which is the foundation of sustainable development.

Our sales offices and warehouses include PV industry experience enables us to provide in-depth material sourcing and supply chain expertise for every production & installation process.

Today, our company is one of the most important PV suppliers in the North America and Europe. Our sales offices and warehouses include PV industry experience enables us to provide in-depth material sourcing and supply chain expertise for every step of production and installation process.

While improving the yield and performance of solar energy products, our PV industry experience enables us to provide in-depth material sourcing, financing and supply chain expertise for every step.

Under the leadership of the President of the Transition, the company Solen, leader in the field of renewable energies, announces the completion of the largest solar power plant, to date, in Central Africa. This infrastructure, whose official reception is scheduled for September 28, could power up to 300,000 homes thanks to its power of 30 megawatts.

Solen, an international company with operations in Gabon, announced this Wednesday, August 28, 2024, the completion of the largest solar power plant, to date, in Central Africa. Carried out under the leadership of the President of the Transition, General Brice Clotaire Oligui Nguema, this project benefited from the support of the Task Force of the Presidency of the Republic, the Ministry of Energy and that of Economy and Participations.

With a capacity of 30 megawatts, this plant is equipped with a solar tracking device (or solar tracker) and a battery electrical energy storage system, is a major step forward for Gabon's energy transition, we learned. It could power up to 300,000 homes. The official reception of the works of this first phase is scheduled for September 28, 2024.

According to the company, this initiative marks a major turning point in the country's energy strategy, aimed at diversifying its energy sources and strengthening its commitment to sustainable development. The 30 MW solar photovoltaic plant is only the first step in an ambitious plan to reach 120 MW in the long term, aimed at limiting dependence on fossil fuels. It reaffirms Solen's commitment to Gabon's economic development.

This project will contribute to the creation of several direct and indirect local jobs, while promoting

Gabon's energy independence. This solar power plant, built under the direction of His Excellency the President of the Transition, is a crucial step for the energy future of Gabon and for all of Central Africa, said Simon Edou-Eyene, project coordinator. The solar power plant, located between Ay?m? Plaine and Ay?m? Maritime, in the Estuaire province, represents a significant technological and environmental advance for the region.

A leader in renewable energy, Solen acts as an independent power producer and focuses on emerging African markets, paying particular attention to the energy needs of critical industrial and national infrastructures. The company uses cutting-edge software and technical solutions to offer competitive and reliable power systems in the form of a grid-tied solar system or a PV-Diesel-Bess hybrid mode.
