

Solar power bank

Solar power bank

If you've been considering a solar power bank for quite a while, it's definitely time to pull the trigger. Power banks are awesome. A huge advantage is that they're environmentally-friendly and can maintain their charge without any electricity. Sunlight is all you need to charge your gear on the go.

Having a solar power bank means being able to charge all your electronics anywhere, any time. Say good-bye to dead mobile phones during travel or extended periods away from an outlet. No more dying tablets, phones, or other small devices. Talk about peace of mind!

The convenience, portability, and efficiency can't be beaten. But there are also a lot of choices out there and not all solar power banks are created equal, so I've made this handy guide to give you my top picks of the best solar power banks for different needs.

Following my top solar power bank recommendations is an informative breakdown of important considerations everyone should read before buying a solar bank of their own.

When it comes to a lightweight, smart way to stay charged on-the-go, you can't go wrong with the Solargard power bank; making it my top pick for the best solar power bank overall.

It holds up to five charges, so you can be sure you won't end up with any dead devices, no matter where you are. Its solar panels let you charge it up with some sunlight or with a USB-C chord; whichever option is most convenient. There's a good reason it's considered the top solar power bank on the market.

Our team rated this as their best solar power bank for backpacking for a number of reasons, they loved how easy to use it was alongside its small and lightweight profile. They felt it fit all the points needed for a powerbank that isn't going to be going out in the wilds without adding any unnecessary heavy or expensive extras. Instead the manufacturers have concentrated on creating a product that works as it should, retains charge and offers a good amount of power.

It's also perfect if you have multiple electronics you want to charge at the same time; or other people you'll be sharing it with; because it has 2 USB output ports. The power bank charges up quickly via solar energy or with two different USB cables. It's nice to have options if you don't have easy access to one or the other.

If you're an avid camper or off-the-beaten-track travel enthusiast, you'll love that it also serves as a large, super-bright LED flashlight with 3 different modes.

Solar power bank

Our team loved this Riapow solar charger, especially the massive capacity it holds. They felt it was a contender for the best survival solar power bank because of that, plus the additional features like weather resistance and the flashlight. They also felt the protection added around the sides worked perfectly without adding too much bulk.

If you tend to expose your gear through some pretty rough conditions – whether for travel, work, camping, or other outdoor ventures – you'll appreciate that this solar power bank is designed to be waterproof, shock-proof, and dustproof, with safely sealed connection ports. The BoxWave Power Bank Solar Pack is the most durable you'll find.

Other features that make this power bank super for travel are its dual charging capabilities via 2 USB output ports and its LED bulbs that light up a large area with 1,000 lumens. And if you find yourself in an emergency situation, it's good to know you have a powerful strobe to signal for help.
