

Solar power to battery

Thinking about adding solar batteries to your solar system? That's great – solar batteries are becoming an essential component in maximising the benefits of solar energy.

You can also compare prices for solar-plus-storage with our help. Fill in a few simple details in this short form about your home and our expert installers will get in touch with free quotes.

After analysing each battery's specifications and core attributes, we determined the seven best solar batteries and gave them a rating out of five across each of these key criteria:

Here's a handy comparison chart with the key specs of our top seven best solar batteries. Before you make your decision, though, check out our complete guide on solar batteries.

Our researchers spent 28 hours investigating the solar battery market, first narrowing the huge field down to the top 27 models currently available. After analysing each one, we then determined the seven best solar batteries.

Tesla is best known for its electric cars – and with that, comes excellent knowledge on making batteries. Its Powerwall 2 is the perfect example, achieving the rare feat of a 100% usable capacity.

That means you can use all 13.5 kilowatt hours (kWh) of the Powerwall 2's available power, which in situations where you need to use the entire battery's charge, can be extremely useful.

The majority of solar batteries have usable capacities lower than their actual capacity, so you can only use say, 90% of a battery's available power.

Solar batteries are rarely cheap, but if you want great value for money then look no further than the Smile5 ESS 10.1 from Alpha. It costs £3,958, which is lower than the typical solar battery price of £4,500, and it has an impressive usable capacity of 9.1 kWh.

That puts the Smile5 ESS 10.1 up there with some of the best mid-to-high range batteries on the market, but without the price hike. For context, the Encharge 10T has a 10 kWh usable capacity, and costs a comparatively eye-watering £8,374.

The lower price tag doesn't come at the cost of durability either, as the Smile5 ESS 10.1 boasts 10,000 cycles (going from a full charge to empty = one cycle). That'll mean your battery comfortably lasts well over a decade without much impact to its efficiency.

Solar power to battery

Almost all solar batteries come with a 10-year warranty, and the Moixa Smart Battery is no different. What separates it from the pack is the Gridshare initiative, which will give you an unlimited warranty if you join.
