

Victoria commercial solar

Victoria commercial solar

Besolar is the largest solar installer in Southern Vancouver Island. We have been in business for 40 years as the solar division of Brewis Electric Company. Besolar provides an all-inclusive customer experience from the initial assessment, engineered system design, complete system installation, commissioning and industry leading warranty. We also provide a full range of electrical services including EV charger installation, electrical panel replacements and complete service upgrades.

Our installation crews are fully trained and certified on all of the equipment we install, and take great pride in our safety procedures and quality control measures.

Besolar services the following cities and surrounding areas: Victoria, Sidney, Langford, Royal Bay, Sooke, Mill Bay, Cobble Hill, Duncan, Chemainus, Ladysmith, Shawnigan Lake.

Commercial solar systems for businesses take the roof space of one of your essential assets - your building, site or factory - and make it work even harder for you by reducing both energy costs and your carbon impact.

Making the decision to rely less on grid power is a smart way to protect your operational budget from energy volatility. With an energy market that continues to rise and fall, you can expect to see drastic changes to your expenses over the coming years. Removing your reliance on the grid means having more control over your energy costs, and with business solar rebates available, costs can be mitigated for your commercial solar panel installations in Victoria.

What's more - our aim is to make your commercial solar solution cash-flow neutral or positive from day one. By doing this, we can ensure your solar system is not only feasible but available for you as soon as possible with as reduced an upfront cost as possible.

When combined with our other services such as commercial energy broking or network tariff and demand analysis, you could soon be looking at hundreds to thousands of dollars in business energy savings each month, with minimal effort.

Commercial solar or business solar as it's often called, refers to commercial and industrial scale solar installations -- encompassing a range of industry and customer types, solar panel designs, and project sizes.

With commercial solar PV systems, your business in Victoria can generate solar electricity at a significantly lower cost than purchasing electricity from an energy supplier by harvesting the power of the sun!

With drastic increases to the wholesale energy market across the eastern seaboard in 2022, in some states, up to 300%, it's no coincidence that savvy business owners are choosing high quality commercial solar systems

Victoria commercial solar

in Victoria for their factories, sites and offices to help reduce business operational costs and carbon emissions.

Each industry has specific considerations and requirements when it comes to assessing and installing solar power, and with our extensive experience, we can guide you on the right solar system that makes the most sense for your business. Our in-house team of Clean Energy Council approved designers and commercial solar installers, and project managers can manage the most challenging projects to ensure you are saving with solar power for up to the next 25 years.

You're a high energy demand business, with a lot of tools and machinery. You might think that solar energy isn't fathomable for the demand your business requires, and compromises efficiency. Solar has worked for hundreds of Australian businesses like yours and with the continued development of high quality panels, solar is here to save you money and reduce your carbon footprint.
