

Virtual power plant 570 kWh

Virtual power plant 570 kWh

As more and more Aussies opt for renewables when it comes to powering their home, the question of "what else can I do?" often comes to mind. And, as part of that "next step" research, you may have found yourself coming across terms like "battery aggregation" or "energy sharing". In general, both of these terms refer to the same concept – a Virtual Power Plant (or, a "VPP".)

A relatively new concept, VPPs aren't quite as common in energy discussions as solar panels, inverters, and home battery systems. Nonetheless, they're still quite a hot topic among solar-equipped households. But what's all the fuss about? What does a VPP have to offer a solar homeowner? Is there a financial benefit? Is it worth getting involved with a VPP at all? In this article, we'll help you break it down. We'll look at VPPs, their history, their purpose, and most importantly, what they can offer you.
