Vivint Smart Home rolled out a new feature for its Vivint Smart Energy customers to view solar production data from their solar systems directly in the Vivint app, including data on how much energy their panels generate, insights into how well their energy production is working, their potential savings over using energy from the grid, as well as what kind of environmental impact their system is having.

"Smart Energy has been a major focus for us over the past couple of years as we look to expand our industry-leading smart home experience for our customers," said Evan Pack, senior vice president of energy at Vivint.

This new integration is another step towards making the home smarter as well as empowering our customers with the data they need to be smarter with their energy use. We're excited to bring this new feature to customers and look forward to adding more features in the future.

The feature will be available to existing Vivint customers with an Enphase inverter and to customers with SolarEdge inverters that are installed by Freedom Forever, with plans to expand to additional customers in the near future.

Solar Magazine is a major solar media outlet established to connect and build close ties between participants in the solar energy industry, including installers, contractors, developers, EPCs, government agencies, and industry organizations. [Read more solar news here->](#)
