As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

Did you know that President Jimmy Carter had solar panels installed on the roof of the White House back in the 1970s? Whether you live in Georgetown or Eastern Market, Columbia Heights or Navy Yard, thanks to D.C.'s solar incentives you too can feel like you live at 1600 Pennsylvania Avenue.

Between the federal tax credit and other DC-specific incentives, you can save thousands on solar panels, making them well worth it. Here's how you can lower the cost of solar in the nation's capital.

If you're considering going solar in DC, we have good news: Some great incentives can substantially improve your return on investing in solar panels. The three below are some of the most impactful incentives for Washington D.C. homeowners.

The Residential Clean Energy Credit, formerly known as the federal investment tax credit (ITC), can reduce your solar panel system's cost by 30%. Your entire system, including all the equipment, labor, permitting, and sales tax, qualifies for this tax credit.

In Washington D.C., the average cost for a 5 kW solar panel system is around \$14,866. Once you factor in the 30% credit, the cost of a solar panel system in D.C. comes down to \$10,406.

When you file your taxes, you can claim this incentive as a credit towards your federal tax bill. Just keep in mind that to qualify for the ITC, you need to purchase your system either with cash or a solar loan-if you lease your system, you won't be eligible.

You also need a high enough tax bill, though you can roll over any remaining credit year-to-year until the end of 2034 when the ITC expires. The only time you might be eligible for a direct payment for the ITC is if you're a tax-exempt entity, like a nonprofit organization.
