

Wind power generator companies

Wind power generator companies

Energy Digital Runs Through the World's Leading Companies Operating in the Wind Power Industry, Including GE, Siemens and NextEra Energy. Ember's latest yearly electricity generation, capacity, emissions and demand data from more than 200 geographies, published in December, showed that wind power's share of worldwide electricity usage in 2022 ...

Explore top wind turbine manufacturing companies like GE Power and Vestas. Our analysis details their contributions to clean, sustainable, renewable energy Solutions

1. NextEra Energy Resources. At the forefront of the renewable energy revolution stands NextEra Energy Resources. A champion of clean energy and the world's largest producer of wind and solar power, NextEra Energy Resources epitomizes what it means to be an industry leader.

Ember's latest yearly electricity generation, capacity, emissions and demand data from more than 200 geographies, published in December, showed that wind power's share of worldwide electricity usage in 2022 was 7.3%, with wind making up 11.2% of generation in Europe in the same year. In 2018, according to the Global Wind Energy Council, upcoming wind power markets rose from 8% to 10% across the Middle East, LATAM, South East Asia and Africa

Data from the International Energy Agency also showcases how the amount of electricity generated by wind increased by 265TWh in 2022, up 14%, which is also the second largest growth of all power generation technologies. This is solidified by wind's long-standing position as the leading non-hydro renewable technology, generating over 2,100TWh in 2022 -- more than all other forms combined.

Offering development, engineering, financing and technical services, Renewable Energy Systems Americas (RES) constructs renewable energy projects for its worldwide customer base. RES now has an ever-growing portfolio, made up of 110 solar, wind, transmission and energy storage projects in the US alone and more than 1,000 miles of transmission line. The RES Group has been active in the renewable energy industry for more than 40 years and utilises its expertise for both onshore and offshore wind projects as well as solar and the transition to a low-carbon economy.

Owned by Spanish company EDP Renewables, the North American division has developed more than 8,800MW of capacity and operates more than 8,400MW of renewable energy projects that generate clean power, enrich rural communities, and accelerate growth toward a sustainable future. With 59 wind farms and 12 solar parks in North America alone, EDP Renewables North America works to fulfil its mission of 'leading the energy transition to create superior value for all'.

A part of the Iberdrola Group, Avangrid provides onshore and offshore wind power and solar power to clients

Wind power generator companies

across 20 US states. In its bid to transition America toward a clean and connected future, it has a footprint in 24 states with US\$41 billion in assets. Avangrid's primary businesses are networks, which serves 3.3 million electric and natural gas customers in the Northeast, and renewables. The company has a workforce of more than 7,600 employees and has been named one of the World's Most Ethical Companies for five consecutive years by the Ethisphere Institute.

Vestas designs, manufactures, installs and services wind turbines in 83 countries and has a workforce of more than 25,000 employees globally. The company has installed in excess of 66,000 wind turbines in its portfolio. A leader in sustainable energy, Vestas's wind energy and hybrid projects have already prevented 1.9bn tonnes³ of CO₂ being emitted into the atmosphere and contributed to a more sustainable energy system, playing a crucial role in laying the foundations for the sustainable era.

In at number 5 is NextEra. For three decades, the company has pioneered universal solar and has positioned itself as an energy storage leader. The American energy company that is one of the world's largest wind and solar energy generators and also operates nuclear power and natural gas plants. It has made investments in emissions-free wind and solar generation, innovative battery storage technology, low-emissions natural gas generation, safe and emissions-free nuclear power, industry-leading energy efficiency programs and transmission lines.

Since MHI delivered the first equipment for commercial use in Japan in 1982, the group has supplied more than 4,200 units, around 4.4GW, of wind power generators globally. Its expertise is based on more than four decades of experience in wind turbine manufacturing, as well as maintenance and troubleshooting. It has a focus on on-shore wind turbines, with its group company DIAMOND WTG ENGINEERING & SERVICES, INC. is providing these services in the US.

A more than 175-year-old technology company which played a major role in the early years of electricity, Siemens's wind power offering is extensive. The company established the world's first offshore wind power plant in 1991 and continues to be a large player in both the onshore and offshore spaces. As a market leader in connecting offshore wind to the grid, Siemens has 6.5GW connected to date and a further 4.5GW under construction.
