

Wind turbine controller 48v

Wind turbine controller 48v

This controller is ideal for off-grid installations like remote homes, cabins, and even for camping setups, providing reliable energy management in varied environments.

Yes, but the controller's design might differ based on the application. Off-grid systems require battery charging regulation, while grid-tied systems need to synchronize with the grid's voltage and frequency.

This all-new MPPT Wind Turbine Charge Controller 48V 24V 12V Auto allows you to always have perfect control over your Wind Turbine system from wherever you are and maximizes its performance.

This wind charge controller can handle 400W, 500W, 800W, to 1000W wind turbine power input. It Auto detects the battery voltage, whether 48v, 24V or 12V and switches to the best charge voltage.

This wind charger combines a compact design with good heat dissipation. It is widely applicable to marine vehicles, street lamps, households, monitoring systems, small mobile base stations and other places where wind turbines are installed.

4. it has an emergency brake switch, and switch "one"; makes the system the emergency braking state. The red LED will be lit at the same time. If it is in the "0" state, the controller is in the normal working state.
